Arthropathies (M00-M25)

Includes: Disorders affecting predominantly peripheral (limb) joints

Infectious arthropathies (M00-M02)

Note: This block comprises arthropathies due to microbiological agents. Distinction is made between the following types of etiological relationship:

- direct infection of joint, where organisms invade synovial tissue and microbial antigen is present in the joint;
- indirect infection, which may be of two types: a reactive arthropathy, where microbial infection of the body is established but neither organisms nor antigens can be identified in the joint, and a postinfective arthropathy, where microbial antigen is present but recovery of an organism is inconstant and evidence of local multiplication is lacking.
